(54) SEMICONDUCTOR DEVICE

(57) Abstract;

PURPOSE: To enhance maximum memory capacity and to enhance a mounting density by superposing a semiconductor element and a spacer made of an insulation material in a laminar state in a package,

CONSTITUTION: A semiconductor element 1 and a space 2 made of an insulation material are superposed in a laminar state in a package. Realn 6 seals the element 1, the spacer 2, the inner terminal of an external lead 4 and fine metal wirings 5. Thus, maximum memory capacity is enhanced, and its mounting density is raised.
